AP Biology Chapter 9 Guided Reading Assignment

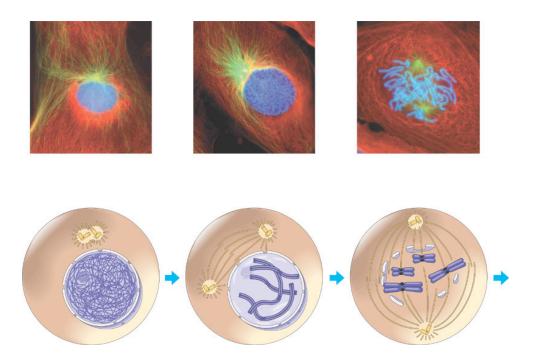

- 1. Compare and contrast the role of cell division in unicellular and multicellular organisms.
- 2. Define the following terms:
 - a. Genome
 - b. Chromosomes
 - c. Somatic cells
 - d. Gametes
 - e. Chromatin
 - f. Sister chromatids
 - g. Centromere
 - h. Mitosis
 - i. Cytokinesis
 - i. Meiosis
- 3. List the activities of the cell cycle:
 - a. Mitotic phase
 - b. Interphase
 - c. G1 phase
 - d. G2 phase
 - e. S phase
- 4. Define the following terms:
 - a. Mitotic spindle
 - b. Centrosome

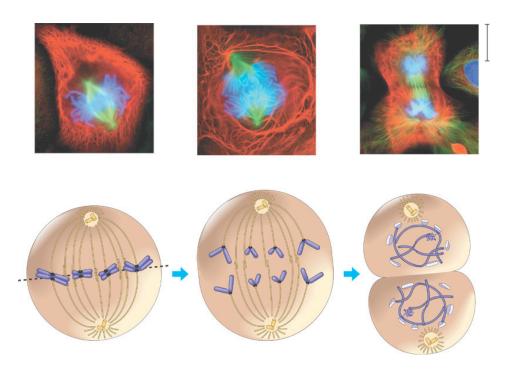

- c. Microtubule organizing center
- d. Aster
- e. Kinetochore
- f. Label below:

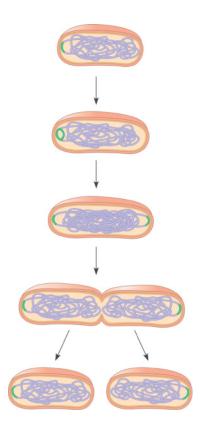

5. Label the diagram below:

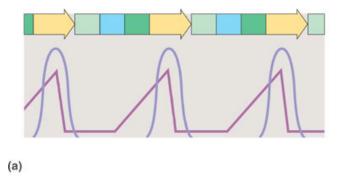

6. Describe the experiment concerning the movement of microtubules during mitosis and its results.

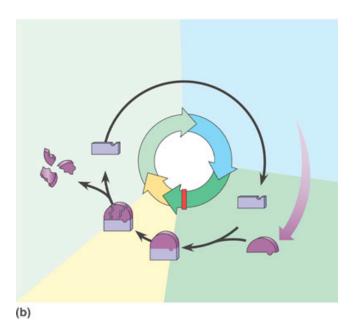

- 7. Contrast cytokinesis in plant and animal cells.
- 8. Define binary fission and label the diagram below:

- 9. Discuss the hypothetical evolution of mitosis.
- 10. What is the cell cycle control system and how do checkpoints play into this?
- 11. What is a cyclin and what does it activate?

- 12. What are Cdk's?
- 13. What does MPF stand for and what does it promote?
- 14. Label the diagram below illustrating the molecular control of the cell cycle?

- 15. What is a growth factor?
- 16. What is density-dependent inhibition?

- 17. What is anchorage dependence?
- 18. Define the following terms: a. Transformation

 - b. Benign tumor
 - c. Malignant tumor
 - d. metastasis
